BOBURMIRZO SOBIRJANOV

Python Backend Developer

+998 94 877 36 37 | boburmirzowork@gmail.com | Tashkent, Uzbekistan
github.com/BoburmirzoAI | t.me/B_Sobirjanov

PROFESSIONAL SUMMARY

Python Backend Developer with hands-on experience building scalable REST APIs and microservices using Django, Django REST Framework, and FastAPI. Proficient in containerization with Docker and experienced in designing microservice architectures with load balancing and health-check patterns. Skilled in Prompt Engineering and working with AI agents to accelerate development workflows. Developed production-level backend systems including an AI-powered tender intelligence platform, a CRM system, and an anime streaming platform. Eager to contribute to a professional backend team and grow in a challenging environment.

TECHNICAL SKILLS

Languages	Python (primary), HTML, CSS, JavaScript (basic)
Frameworks	Django, Django REST Framework, FastAPI, Aiogram 3
Databases	PostgreSQL, SQLite, Redis (caching & broker)
DevOps	Docker, Docker Compose, Nginx, CI/CD, Celery, Makefile
Architecture	Microservices, Load Balancing (Round Robin, Weighted, Least Connections), Health Checks
Auth & Security	JWT Authentication, API Key management, Rate Limiting
AI & LLM	Prompt Engineering, AI Agents, Vibe Coding
Tools	Git, GitHub, Poetry, Pydantic, SQLAlchemy, Pytest

PROJECTS

TenderIQ — AI-powered platform for discovering and analyzing Uzbekistan government tenders

- FastAPI backend with 10 REST API routers, async SQLAlchemy, PostgreSQL, Redis
- ML modules: tender-company matching (TF-IDF + cosine similarity), price prediction, anomaly detection
- Web scrapers for my.gov.uz, uzex.uz, mc.uz with deduplication and data cleaning
- Celery + Celery Beat for scheduled scraping, ML retraining, and Telegram notifications
- Aiogram 3 Telegram bot with user subscription plan management
- Docker Compose with 8 services: API, bot, Celery worker/beat, PostgreSQL, Redis, pgAdmin, Flower
- Frontend (Next.js) and admin panel built using Vibe Coding (AI-assisted prompt engineering)

microservice-load-balancer — Graduation project: automatic load balancing module between services in a microservices architecture

- 3 FastAPI microservices behind a custom load balancer with 4 algorithms: Round Robin, Weighted Round Robin, Random, Least Connections
- Automatic health-check module with failure detection and service rotation
- Load testing, stress testing, and real-time monitoring demo scripts
- Fully Dockerized with Docker Compose and deployment guide for 4 Ubuntu servers

Ani-Web — Anime watching and manga reading platform with catalog, search, and user library

- Built the full REST API backend with Django REST Framework (Poetry dependency management)
- Frontend and admin panel developed via Vibe Coding (AI-assisted prompt engineering)

CRM — CRM system for an education clinic with integrated client wallet and in-app chat

- Django backend with REST API: client and order management, authentication
- Admin panel, user frontend, and landing page developed via Vibe Coding (AI-assisted prompt engineering)

- Dockerized deployment with Docker Compose

EDUCATION

B.Sc. in Computer Engineering | Tashkent University of Information Technologies (TATU)
2021 — 2026 · Tashkent, Uzbekistan

- Graduation project: Microservice architecture with load balancing and health-check patterns

Python Backend Development Course | Najot Ta'lim
2025 — 2026 · Tashkent, Uzbekistan

- Certificate of Completion — Django, FastAPI, Docker, PostgreSQL, microservices
